Highest degree attained

Bachelor of Science in Administrative
Information Systems

Something about me

I am a 24-year-old ambitious, determined and stubborn individual, who is thrilled when solving problems and learning from them. Since my childhood, I have been fascinated by technology. If there is a discussion about technology I am probably already there.

My view on life tends to be from many perspectives and angles or as broad as possible. I am also not afraid of failure. I am more worried about missing out on discovering something great. Graphic design was the initial field, from which I started my career. At first, I was designing artworks and different advertisement materials, but during my time at university, I discovered a new love - code. I was overtaken by the thought, that there are virtually endless possibilities of what I can create with my fingertips and a computer. I was writing code, debugging and writing again and also debugging, from native IOS and Android apps to Wordpress and SPA. Nothing would stop my curiosity to explore, learn and grow.

Big things do of course require a good team, so communication and cooperation are vital. These are just some of the things I learned through my work.

Now comes the time when I become a part of your team and together we can make many products that will simplify and make life easier from thousands of people from around the world, without borders - which is of course the real magic of technology.

Work experience

Kristina Dovidija s.p. - Markišavci 9, 9000 Murska Sobota

Web development. Analysis, planning, development, testing and implementation of websites of different scale and type.

2017 - now
